-!- FUNCTION: MAY HAVE A ROLE IN PHOTOTRANSDUCTION. A SECOND MAY BE REQUIRED FOR ENZYME ACTIVITY.

-!- CATALYTIC ACTIVITY: GTP = 3',5'-cyclic GMP + diphosphate.

-!- SUBUNIT: DIMER (PROBABLE).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                         A LIU Y., RUCHO A.E., RAO V.D., Hurley J.H.;

T "Catalytic mechanism of the adenylyl and guanylyl cyclases: mode mutational analysis.";

Proc. Natl. Acad. Sci. U.S.A. 94:13414-13419(1997).

C -!- CATALYTIC ACTIVITY: GTP = 3',5'-cyclic GMP + diphosphate.

C -!- ENZYME REGULATION: ACTIVATED BY NITRIC OXIDE IN THE PRESENCE MAGNESIUM OR MANGANESE IONS.

C -!- SUBUNIT: HETERODIMER OF AN ALPHA AND A BETA CHAIN.

C -!- SUBCELLAR LOCATION: Cytoplasmic.

C -!- MISCELLAR DECLIFICITY: LUNG AND BRAIN.

C -!- MISCELLARDOUS: THERE ARE TWO TYPES OF GUANYLATE CYCLASES: SO FORMS AND MEMBRANE-ASSOCIATED RECEPTOR FORMS.

C -!- SIMILARITY: BELONGS TO ADENYLYL CYCLASE CLASS-4/GUANYLYL CYC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   01-APR-1990 (Rel. 14, Created)

                                                                                                                                                                                                                                                                                                                      TO BE CNP > BNP > ANF.

CATALTYTC ACTIVITY: GTP = 3',5'-cyclic GMP + diphosphat.
SUBCELLULAR LOCATION: Type I membrane protein.

MISCELLANEOUS: THERE SEEM TO BE AT LEAST THREE ANP RECE
WITH GUANYLATE CYCLASE ACTIVITY (ANP-A AND ANP-B) AND OF
WHICH IS PROBABLY RESPONSIBLE FOR THE CLEARANCE OF ANP ICIRCULATION WITHOUT A ROLE IN SIGNAL TRANSDUCTION.
SIMILARITY: SOME SIMILARITY WITH CONSERVED REGION OF CANDOMAIN OF PROTEIN KINASES.
SIMILARITY: BELONGS TO ADENYLYL CYCLASE CLASS-4/GUANYLY.
                                                                                                                                                                                                             ween the Swiss Institute of Bioinf
European Bioinformatics Institute.

PEPTIDE

RECEPTOR

Lyase;

(ANP-B) (ANPRB) (GC-B) natriuretic peptide

```
C -I- FUNCTION: RECEPTOR FOR ATRIAL NATRIURETIC PEPTIDE. HAS GUANYLATE CYCLASE ACTIVITY ON BINDING OF ANT. SEEMS TO BE STIMULATED MORE CEFECTIVELY BY BRAIN NATRIURETIC PEPTIDE (BNP) THAN BY AND.

C -I- CATALYTIC ACTIVITY: GTP = 3',5'-cyclic GMP + diphosphate.

C -I- SUBCELLULAR LOCATION: Type I membrane protein.

C -I- SUBCELLULAR LOCATION: Type I membrane protein.

C -I- ALITERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM (SHOWN HERE) AND A SHORT FORM/NER-BI; ARE PRODUCED BY ALITERNATIVE SPLICING.

C -I- MISCELLANEOUS: THERE SEEM TO BE AT LEAST THREE AND RECEPTORS; TWO WITH GUANYLATE CYCLASE ACTIVITY (AND-A AND AND-B) AND ONE (AND-C) WHICH IS PROBABLY RESPONSIBLE FOR THE CLEARANCE OF AND FROM THE CIRCULATION WITHOUT A ROLE IN SIGNAL TRANSDUCTION.

C -I- SIMILARITY: SOME SIMILARITY WITH CONSERVED REGION OF CATALYTIC DOMAIN OF PROTEIN KINASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Hirsch J.R., Herter P., Welkruhoffer M.;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             "Differential activation by atrial and brain natriuretic peptides of two different receptor guanylate cyclases.";
Nature 341:68-72(1989).

SEEMS TO BE STIMULATED MORE EFFECTIVELY BY BRAIN NATRIURETIC PEPTIDE. HAS GUANYLATE CYCLASE ACTIVITY ON BINDING OF ANF. SEEMS TO BE STIMULATED MORE EFFECTIVELY BY BRAIN NATRIURETIC PEPTIDE (BNP) THAN BY ANP. I. CARTON: TYPE J. S. S. C. CYCLIC GMP + diphosphate.

1. SUBCELLULAR LOCATION: TYPE I membrane protein.

1. MISCELLANEOUS: THERE SEEM TO BE AT LEAST THREE ANP RECEPTORS: TWO WITH GUANYLATE CYCLASE ACTIVITY (ANP-A AND ANP-B) AND ONE (ANP-C) WHICH IS PROBABLY RESPONSIBLE FOR THE CLEARANCE OF ANP FROM THE CIRCULATION WITHOUT A ROLE IN SIGNAL TRANSDUCTION.

1. SIMILARITY: SOME SIMILARITY WITH CONSERVED REGION OF CATALYTIC DOMAIN OF PROTEIN KINASES.

1. SIMILARITY: BELONGS TO ADENVILLY TOWARD REGION OF CATALYTIC FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     EMBL; M26896;

- CAPALYTIC ACTIVITY: GTP = 3',5'.cyclic GMP + diphosphate.

- SUBCELLIULAR LOCATION: Type I membrane protein.

- I MISCELLANEOUS: THERE SEEM TO BE AT LEAST THREE ANP RECEPTORS: TWO WITH GUANYLATE CYCLASE ACTIVITY (ANP-A AND ANP-B) AND ONE (ANP-C) WHICH IS PROBABLY RESPONSIBLE FOR THE CLEARANCE OF ANP FROM THE CIRCULATION WITHOUT A ROLE IN SIGNAL TRANSDUCTION.

- SIMILARITY: SOME SIMILARITY WITH CONSERVED REGION OF CATALYTIC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CHAIN

SUBCELLULAR LOCATION: CYCOPLASMIC.
TISSUE SPECIFICITY: KIDNEY AND LIVER.
MISCELLANEOUS: THERE ARE TWO TYPES OF GUANYLATE CY
FORMS AND MEMBRANE-ASSOCIATED RECEPTOR FORMS.
SIMILARITY: BELONGS TO ADENYLYL CYCLASE CLASS-4/GU
FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CATALYTIC ACTIVITY: GTP = 3',5'-cyclic GMP + diphosphate.
ENZYME REGULATION: ACTIVATED BY NITRIC OXIDE IN THE PRESENCE
MAGNESIUM OR MANGANESE IONS.

"Cloning and functional expression of the rat alpha(2) subunsoluble guanylyl cyclase.";

Biochim. Biophys. Acta 1494:286-289(2000).

-!- FUNCTION: HAS GUANYLYL CYCLASE ON BINDING TO THE BETA-1:
-!- CATALYTIC ACTIVITY: GTP = 3',5'-cyclic GMP + diphosphate
-!- ENZYME REGULATION: ACTIVATED BY NITRIC OXIDE IN THE PRES!
                                                                                                                                                   SEQUENCE FROM N.A.

A variant of the alpha 2 subunit of soluble guanylyl cyclase grounding on thin and insert homologous to a region within adenylyl cyclases and functions as a dominant negative protein.";

L. J. Biol. Chem. 270:21109-21113(1995).

C. I- FUNCTION: HAS GUANYLYL CYCLASE ON BINDING TO THE BETA-1 SUBUNITS C. I- FUNCTION: HAS GUANYLYL CYCLASE ACTIVITY AS IT FORMS NON-FUNCTION HETERODIMERS WITH THE BETA SUBUNITS.

C. I- CATALYIK ACTIVITY: GTP - 3',5'-cyclic GMP + diphosphate.

C. I- ENZYME REGULATION: ACTIVATED BY NITRIC OXIDE IN THE PRESENCE OXIDE IN THE PRESENCE OXIDE IN THE PRESENCE OXIDE IN THE PRESENCE OXIDE IN THE PRESENCE OXIDE IN THE PRESENCE OXIDE IN THE PRESENCE OXIDE IN THE PRESENCE OXIDE IN THE PRESENCE OXIDE IN FETAL BRAIL INTERNATIVE PRODUCTS: 2 ISOFORMS; ALPHA-2 (SHOWN HERE) AND ALPHA-2-1; ARE PRODUCED BY ALTERNATIVE SPLICING.

C. INTERNATIVE PRODUCTS: 2 ISOFORMS; ALPHA-2 (SHOWN HERE) AND ALPHA-2-1; ARE PRODUCED BY ALTERNATIVE SPLICING.

C. INTERNATIVE PRODUCTS: 2 ISOFORMS; ALPHA-2 (SHOWN HERE) IN FETAL BRAIL INVEX, COLON AND ENDOTHELIUM.

SEXPRESSED ONLY IN LIVEX, COLON AND ENDOTHELIUM.

C. INTERNATIVE SECURIORS TO ADENYLYL CYCLASE CLASS-4/GUANYLYL CYCLASE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                _HUMAN

"Human soluble guanylate cyclase: functional expression and revision is sonzyme family.";

It soonzyme family.";

Biochem. J. 335:51-57(1998).

C -!- CATALYTIC ACTIVITY: GTP = 3',5'-cyclic GMP + diphosphate.

C -!- ENZYME REGULATION: ACTIVATED BY NITRIC OXIDE IN THE PRESENCE MAGNESIUM OR MANGANESE IONS.

C -!- SUBUNIT: HETERODIMER OF AN ALPHA AND A BETA CHAIN.

C -!- SUBCELLAULAR LOCATION: Cytoplasmic.

C -!- MISCELLAULAR LOCATION: Cytoplasmic.

C -!- MISCELLAUGHS THERE ARE TWO TYPES OF GUANYLATE CYCLASES: SOL FORMS AND MEMBRANE-ASSOCIATED RECEPTOR FORMS.

C -!- SIMILARITY: BELONGS TO ADENYLYL CYCLASE CLASS-4/GUANYLYL CYCL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      01-JUL-1993 (Rel. 26, Created)
